Save with Energy Star Appliances

Barron Electric is excited to announce a new incentive program on the following Energy Star rated appliances:

Energy Star Refrigerator.....\$25
Energy Star Clothes Washer\$50
Energy Star Room Air Conditioner* ...\$25

**not controlled under load management*

Energy Star Refrigerator

Energy Star qualified refrigerators require about half as much energy as models manufactured before 1993. These models use high efficiency compressors, improved insulation, and more precise temperature and defrost mechanisms to improve energy efficiency.

Energy Star Clothes Washer

An Energy Star qualified clothes washer can save \$550 in operating costs over its lifetime compared to a regular clothes washer. They are also better for the environment because less energy is being used and less water is going to waste.

Energy Star Room Air Conditioner

The Energy Star room air conditioners use at least 10% less energy than conventional models. They often include timers for better temperature control, using the minimum amount of energy to cool a room.

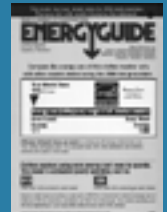

A listing of Energy Star rated products is available online at www.energystar.gov.

Please contact the Member Services Department at 800-322-1008 for more information on this program or e-mail barronec@barronelectric.com.
